Question 1

Your answer: B

In a study of urban gardens, researchers compared pollinator visits to plots containing native plants with visits to plots containing introduced plants. Native plots attracted a wider range of species, even when the total number of flowers was similar. The researchers suggested that plant diversity, rather than flower abundance alone, could help explain the difference.

1 Marked for Review

Which choice best states the main idea of the text?

(A) The number of flowers is the only factor that attracts pollinators.

(B) Native plant diversity may support a wider variety of pollinator species.

(C) Introduced plants cannot survive in urban gardens.

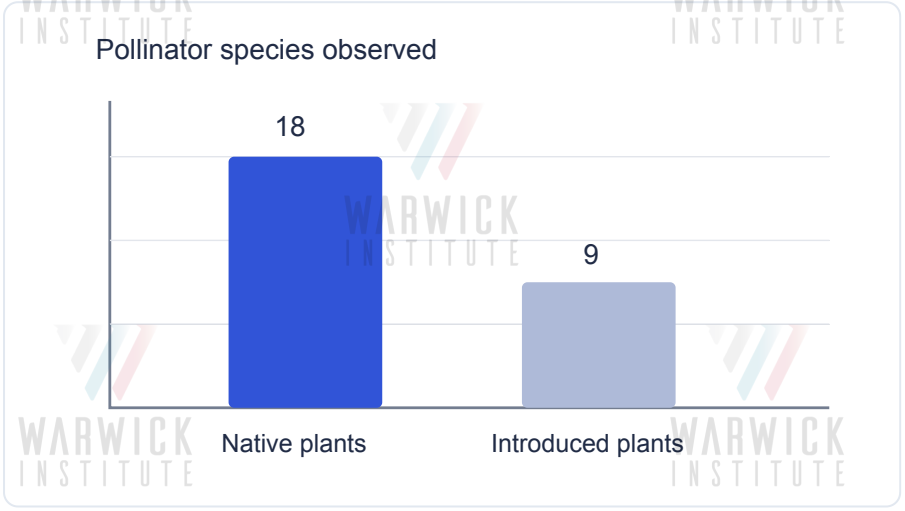

(D) Pollinators visit every type of plant equally often.

Question 2

Your answer: A

2 Mark for Review

Which finding is most directly supported by the graph?

(A) Native plots supported twice as many pollinator species.

(B) Introduced plants had more flowers than native plants.

(C) All pollinator species preferred introduced plants.

(D) Each plot attracted exactly nine individual pollinators.
